EDUCATION

Bachelor of Technology in Computer Science: 8.10 CGPA

Aug. 2021 – May 2025

Non-medical CBSE: 92.8%

Aug. 2019 – May 2021

10th Standard CBSE: 91%

Aug. 2018 – May 2019

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL, HTML/CSS, R

Frameworks: Django, Swing, Selenium

Developer Tools: Git, GCP, VS Code, PyCharm, IntelliJ, NetBeans, CodeBlocks, Docker

Libraries: Pandas, NumPy, Matplotlib, Scikit-learn

Computer Fundamentals: OOPS, DSA, Computer Networks, OS, DBMS, Machine Learning

Experience

Machine Learning Intern

June 2024 – August 2024

- Developed and implemented machine learning models for predictive analytics, processing over 100,000 records using Scikit-learn and Pandas, improving model efficiency by 35% through data preprocessing and cleaning techniques.
- Developed a churn prediction model for a bank, achieving an accuracy of 89% [Link](#)
- Utilized classification and gradient boosting techniques, increasing predictive accuracy for high-risk customer identification by 30% compared to previous models. Conducted data analysis and visualization to support decision-making processes.
- Gained hands-on experience with Natural Language Processing (NLP) techniques.

Projects

Diecasttrader | Python, Django, HTML-CSS, JavaScript, ORM | [GitHub](#)

Oct 2023

- Diecasttrader solves a problem for diecast collectors by providing them a marketplace for to browse, search, and purchase used/new Die-cast models of various types and brands all in one place.
- Added features which allows users to add desired items to a shopping cart, review selected items, and proceed to checkout for purchase. Implemented responsive design, ensuring 100% compatibility across devices.

Self-Driving Car Simulation | Python, Pygame, Ctypes, NEAT | [GitHub](#)

Jan 2024

- Developed a Python-based simulation environment for a self-driving car. Integrated AI algorithms capable of learning from mistakes and improving pathfinding abilities with each generation. achieving a 50% reduction in collision rate after 200 generations by improving pathfinding and obstacle avoidance.
- Average 30% reduction in pathfinding errors as the simulation progressed and Increased driving efficiency by 40% based on the total distance traveled before crashing

GaramChai | Python, Django, HTML-CSS, ORM | [GitHub](#)

Nov 2024

- GaramChai is a Django-powered platform for organizing and discovering meetups, where the users can navigate and register for meetups using email ID
- Optimized backend to handle 500+ users and event registrations seamlessly with dynamic UI showcasing 10+ events with details like descriptions, locations, and visuals.
- Utilized Django's admin panel to enable admins to manage meetups. Admin can Add, edit, and delete meetups, locations, and participant details with ease as well as monitor and manage registrations.

Certificates

Mastering Data Structures & Algorithms using C and C++
